

Orthodontic treatments to improve your looks

Treating conditions such as too many teeth, poor bite, gaps between the teeth, crooked teeth and poor jaw alignment, all come under a specialist branch of dentistry called orthodontics.

To deal with these conditions we offer a range of painless orthodontic treatments to improve the function and appearance of the mouth.

One of the most common ways to do this is by using dental braces to move teeth into a new and better positions. These can be traditional fixed braces, or virtually invisible braces, such as the Invisalign system that is becoming increasingly popular.

These types of braces consist of a series of clear aligners which gently move and straighten your teeth. By using this type of system, you can transform your smile without it affecting your day to day life. The aligners are comfortable, clear and removable which means you can still eat whatever you want, and it is easy to keep your teeth and braces clean.

Braces that are right for you and your smile

Our appliance options all work a similar way, gradually moving teeth into their new and desired position. Some are more suitable for milder conditions, while others are better for more complex orthodontic problems.

Whatever you require, we will create a personalised and individual orthodontic treatment plan that will give you a terrific smile.
