

## Transforming your smile with veneers

Dental veneers can make a huge difference to the way your smile looks. Veneers are very versatile as they can be used to hide a number of imperfections, including discoloured teeth, gaps, uneven and crooked teeth. You can even choose a particular shade to match your exact requirements, just like with tooth whitening!

### Natural, well fitting veneers

The procedure involves preparing your teeth by shaping them and taking a thin layer of enamel from the surface so they don't look or feel bulky once the veneers are in place. We take an impression, or mould, of the area, which is then sent to our dental laboratory so the veneers fit well and look and feel natural.

### Your new smile

Once ready, the veneers are bonded into place and will last a long time. They will become part of your own teeth and giving you a beautiful, natural-looking smile.
